

Antiphiona fragrans

Family: Asteracea

Collection Number: 24

Description: A medium sized shrub, bushy and dense, with many stems and branches. Compound leaves, small delicate leaflets. Stems fairly straight, smooth, pale in colour. Flowers have a 'fluffy' appearance, tinged maroon but turning white. Very pungent herbal smell, pleasant but strong. Shrubs were flowering in June.

Habitat: Common on NamibRand. It grows along watercourses that get relatively more rain than the majority of the reserve. Grows well in coarse sand in riverbeds at the base of the Nubib mountains.

WOLWEDANS HERBARIUM (NRNR)

NAME: *Antipbiona fragrans*

Collection No: 24

Date: 05/06/99

Collector : Louise Clapham
