

# *Crotalaria virgultalis*

**Family:** Fabaceae

**Collection Number:** 100

**Description:** A very slender, erect herb. The main stem may be slightly woody, lower branches are grey-green and waxy. Stems are particularly long and fine, leaves are linear, simple and alternately arranged.

The inflorescence is a long raceme. Flowers are bright yellow, the petals are differentiated. In the budding stage, the sepals are a purplish colour. The fruit is a seed pod typical of the family.

**Habitat:** Dune belt, growing on stabilised dune slopes, sometimes in the shade of *Acacia* trees. They appear to be more common in the southern part of the dune belt, from Wolwedans southwards, but nowhere are they abundant.

**WOLWEDANS HERBARIUM (NRNR)**

**NAME:** *Crotalaria virgultalis*

**Collection No:** 100

**Date:** 22/07/01

**Collector :** Louise Clapham

**Grid ref.:** 2516 Ac

**Locality:** Stellarine/Aandster border, back of Gorrasis mountains.  
Top of the dune before riverbed.

**Habitat:** Top of vegetated dune, grassland, partial shade beneath  
*Acacia erioloba*

**Plant features:** An erect, very slender shrub. Leaves simple, linear.  
Petals bright yellow, sepals at bud stage purplish. Fruit a rounded pod.

**Other notes:** Locally common.

## NBRI - Collection Data Form

Collectors No. 100 Date 22.07.2001  
 Collector/s Louise Clapham GPS S E  
 Locality (please describe property, not just grid/gps) Stellavine /  
 Anderster border Back of Garrisis mts, Grid 2516 Ac  
 Plant horseshoe turn-off but before river bed Altitude  
 Aspect Slope level Exposure part shade, Photo no's.  
 Voucher for mostly full sun.

## DESCRIPTION OF PLANT Please give as much information as possible

Species Fabaceae, Crotalaria spp? Perennial/Annual

Habit (eg: dwarf shrub) Small erect shrub

Height ± 50 cm Occurrence(eg: common) Rare

Flower/Inflorescence (colour, shape, size, smell, texture) Bright yellow - petals differentiated  
 banner, keel, wings.

Leaves (simple/compound, margin, shape, colour, texture, stipules) Simple, linear (very  
 long + slender), alternate

Stems and bark (colour, texture, habit - eg: erect stem with yellow peeling papery bark - presence or  
 absence and smell of sap or latex - eg: milky latex with unpleasant smell) Main stem woody,  
 lower branches grey green, slightly waxy. Stems very long  
 and slender.

Fruits and seed (presence/absence, shape, colour, edibility and taste if edible, single or clustered,  
 maturity) ~~haven't yet~~ A slightly rounded pod. Pale green  
 turning slightly reddish.

Roots/Underground organs (shape, texture, colour, size).

Other (eg. uses, ecology).
