

# *Cucumis sagittatus*

## Goats apple

**Family:** Cucurbitaceae

**Collection Number:** 93

**Description:** An annual prostrate creeper. The leaves are relatively large and simple with palmate venation. They are cordate, with entire / sinuate margins, very rough with small prickles. There are also small prickles on the stems, as well as tendrils. Flowers are white/cream and trumpet-shaped. The fruits are like very small melons, dark green with lighter stripes when ripe, yellowing with age. They are covered in fine hairs which brush off quite easily.

**Habitat:** This plant grows on gentle slopes and level areas where there is coarse sand and rocks. It is not very common on the reserve but has been seen close to the picnic spot at Draaihoek, and at the base of Gorrasis mountains.

Only 1 specimen,

DESCRIPTION OF PLANT Please give as much information as possible

Species. Cucumber family *Cucumis sagittatus*. Perennial/Annual

Habit (eg: dwarf shrub). Creeping herb

Height. fm. cm Occurrence(eg: common). Uncommon

Flower/Inflorescence (colour, shape, size, smell, texture).

Too late to find flowers, which are fresh, but old ones appear to have been white/cream trumpet shaped.

Leaves (simple/compound, margin, shape, colour, texture, stipules).

Simple, large, cordate, margin sinuate/entire.  
Palmar veination.

Very rough with small prickles.

Stems and bark (colour, texture, habit - eg: erect stem with yellow peeling papery bark - presence or absence and smell of sap or latex - eg: milky latex with unpleasant smell).

Stems radiating across the ground from a central point. Prickles on stems. Tendrils.

Fruits and seed (presence/absence, shape, colour, edibility and taste if edible, single or clustered).

Maturity. L Small marrow/melon. Dark green with lighter stripes, yellowing with age. Very hairy.  
Hairs brush off the fruit very easily.

Roots/Underground organs (shape, texture, colour, size).

Other (eg: uses, ecology).

Indigenous names and languages.
